Abstract:

JP 59213747 A

Compsn. consists of polypropylene resin, 1,3,2,4-di(methylbenzylidene)sorbitol and calcium lactate and/or stearyl calcium lactate.

100 wt. pt. of polypropylene resin, 0.3 pt. of 1,3,2,4-di(methylbenzylidene)sorbitol and 0.1 pt. of calcium lactate were sufficiently mixed with a mixer. Mixt. was pelletised with an extruder (40m/m) at 260 deg.C of resin temp., followed by injection moulding.. Mould release characteristics of the prod. are good. Heat-stability of the prod. (0.5 mm sheet) at 150 deg.C per hour is 65. No elution of 1,3,2,4-di (methylbenzylidene sorbitol was observed. (less than 1 ppm). Haze (%) was 45.3 before immersing in water at 100 deg. for 24 hours and 49.2 after the immersion.

USE - Compsn. is useful as packing material for food stuff or medical equipment, improved in transparency.
